

§170.315(d)(13) Multi-factor authentication Supported Use Cases

The Credible platform supports Two-Factor authentication for Electronic Prescribing of Controlled Substances (EPCS).

Credible has partnered with Exostar to provide identity proofing and user authentication for prescribing users. Prescribers must enter a one-time password (OTP) prior to submitting an electronic prescription for a controlled substance. The OTP is generated by either the hard-token from Exostar, or by the soft-token Authy smartphone app.
